INTERACTIVE FISHERIES GOVERNANCE

a guide to better practice

This guide presents a new and creative approach to the governance of fisheries and aquaculture in the world. Called interactive governance, this approach addresses the diversity, complexity and dynamics of fisheries and aquaculture systems through an inclusive, holistic and adaptive framework that is principle-based, with an emphasis on partnership and learning. The guide suggests that all governance systems stand to benefit from the change in perspective that is proposed in this volume.

The practitioner's guide is meant for policy makers, scientists, and other stakeholders in the fields of fisheries and aquaculture. The contributors are part of the network FISHGOVNET, which includes natural and social scientists from different parts of the globe.
